Project V2

Assumptions

Requirements	Assumptions	Representation in ER diagram
Members should be able to register and manage their profiles, establish personal fitness goals (you can determine suitable fitness goals such as weight and time, and members will set the values), and input health metrics	NA	<p>Members table has a first name and last name</p> <p>Goals in members table are set as a target weight and date</p> <p>Health metrics are: weight, height, age ,sex</p> <p>Name and email are also attributes (member profile)</p> <p>PK of the members table is the member ID</p>
They should have access to a personalized dashboard that tracks exercise routines, fitness achievements, and health statistics.	<p>Members take classes, which involve specific exercise routines, described in the description attribute of the classes table.</p> <p>Each member can choose to participate in as many classes as they want, even none.</p>	<p>Health statistics are in the Members table (health, age etc.)</p> <p>Exercise routines are a list of classes they would be attending (Members, takes, and classes table)</p> <p>Fitness achievements can be calculated as amount of classes taken and if there goal has been reached (weight <= target weight, date <= target date)</p> <p>For every class a member participates in, the amount they owed would change</p>

<p>Members can schedule, reschedule, or cancel personal training sessions with certified trainers. Additionally, they should be able to register for group fitness classes.</p>	<p>Every class can have any number of members taking them, including 0.</p> <p>Each class must have a single trainer.</p> <p>Each class must have a single room associated with them.</p>	<p>Classes table includes class description, maximum number of members who can attend, and a time slot it takes place in (limited to the days of the work week)</p> <p>Members can access and manipulate the members, takes, and classes table to reschedule/cancel/take sessions.</p> <p>Group classes and personal training sessions are all under classes table, they are differentiated by the maximum number of members and description</p> <p>PK of classes table is class_id</p> <p>Many to many relationship with members table (takes). Partial participation for both sides.</p> <p>One to many relationship with trainers table (has a) Total participation for classes. Partial participation for trainers</p> <p>One to many relationship with rooms table (is in a) Total participation for classes. Partial participation for trainers</p>
<p>Trainers should have the ability to manage their schedules and view member profiles.</p>	<p>Each trainer must have one trainer schedule</p> <p>Each trainer schedule must have one trainer</p>	<p>Trainer can view members table, and view and change the trainer schedules table</p>

	<p>Each trainer can teach any number of classes, including 0</p> <p>Trainer schedule can only be defined when a trainer exists (weak entity)</p>	<p>Trainer Schedules are broken up into the 5 workdays of a week, each with a specific availability.</p> <p>Trainer table includes first and last name of trainer</p> <p>PK of trainer and trainer_schedule table is trainer_id</p> <p>FK of trainer_schedule table is trainer_id</p> <p>Trainer has a one to one relationship with trainer schedules (has a), total participation for both sides</p> <p>Many to one relationship with class table (has a) Total participation for classes. Partial participation for trainers</p>
<p>Administrative Staff should be equipped with features to manage room bookings, monitor fitness equipment maintenance, update class schedules, oversee billing, and process payments for membership fees, personal training sessions, and other services</p>	<p>Each room must have one room schedule</p> <p>Each room schedule must have one room</p> <p>Each room can have any number of classes be taught in them, including 0</p> <p>Room schedule can only be defined when a room exists (weak entity)</p>	<p>Room Schedules are broken up into the 5 workdays of a week, each with a specific availability.</p> <p>Rooms table includes room number and description of room</p> <p>PK of room and room_schedule table is room_num</p> <p>FK of room_schedule table is room_num</p> <p>Room has a one to one relationship with room</p>

		<p>schedules (has a), total participation for both sides</p> <p>Many to one relationship with classes table (has a) Total participation for classes. Partial participation for rooms</p> <p>Equipment table has, equipment description, condition of equipment, amount of equipment, and purchase date</p> <p>Equipment ID is PK</p> <p>Fees are calculated by looking at the members table and amount owed.</p> <p>Admin has access to rooms/rooms schedule tables, member/takes/classes table, and trainers/trainer schedule tables</p>
